

TALK TO YOUR DOCTOR

It's essential to know all of your treatment options before taking prescription medications. Play your part in prescription safety by getting comfortable asking the right questions to your doctor or caregiver.

Ask questions like:

- How am I supposed to take this medication?
- Are there safer alternatives?
- Is there a risk of dependency or addiction?
- What do I do if I miss a dose?
- Should I avoid anything while taking this medication?
- What is my plan to taper off?
